

CLAIMS

What I Claim is:

1. A method for browsing web sites using a browser program running on a computer, comprising the steps of:

(1) receiving from a server web page structures for web sites and web page attributes, including information concerning said web sites; and

(2) displaying said page structures and said page attributes in correlation with each other.

2. A web site browsing system, which includes a server holding information for web sites and a browser connected to said server for browsing said web sites, comprising:

(1) means for requesting from said server structures of web pages at said web sites and attributes of said web pages, and for receiving said page structures and said page attributes; and

(2) means for displaying said page structures and said page attributes in correlation with each other.

3. The web site browsing system according to claim 2, wherein said page attributes are keywords included in said web pages at said web sites, a number of times said keywords appear, sizes of files, a number of files and dates files are updated.

4. The web site browsing system according to claim 2, wherein said server includes means for using contents held by said server or by another web server to prepare said web page structures and said page attributes for said web pages at said web sites.

1 5. The web site browsing system according to claim 2, wherein said server includes means
2 for, upon receiving a request from said browser, transmitting to said browser a program that
3 includes a command processor, a page attribute processor and a page structure processor, all of
4 which are required to display said page structures and said page attributes in correlation with
5 each other.

1 6. The web site browsing system according to claim 5, wherein said command processor
2 includes means for, in accordance with a browser change manipulation performed by a user,
3 displaying a command for changing a display of said page structures and said page attributes,
4 as well as said page structures and said page attributes.

1 7. The web site browsing system according to claim 5, wherein said program includes means
2 for displaying a list of page structures and a list of page attributes, and for, when either said
3 page structure list or said page attribute list is changed, dynamically reflecting a change in the
4 other list.

1 8. The web site browsing system according to claim 5, wherein said program includes means
2 for displaying, together with said page structures and said page attributes, a list of command
3 areas for changing the displays of said page structures and said page attributes.

1 9. The web site browsing system according to claim 5, wherein said page attribute processor
2 includes means for, in accordance with a change manipulation performed by a user for said page
3 attributes in a display, filtering a display of said page structures and changing a display of said
4 page attributes, and for updating and displaying said page structures.

1 10. The web site browsing system according to claim 5, wherein said page structure processor
2 includes means for, in accordance with a change manipulation performed by a user for said page
3 structures in a display, filtering a display of said page attributes and changing a display of said
4 page attributes, and for updating and displaying said page attributes.

1 11. A web site browsing computer, which includes a communication device for
2 communicating with another computer, and a display device for browsing and displaying web
3 sites by using a web site browser program, said web site browsing computer comprising:

4 (1) means for receiving, via said communication device, page structures at web sites and page
5 attributes included in web pages from a computer holding information for web sites; and
6 (2) means for using said web site browser program to display said page structures and said page
7 attributes in correlation with each other.

1 12. A computer, which includes a communication device for communicating with a different
2 computer and a storage device for storing information for web sites, comprising:

3 (1) means for receiving web site contents via said communication device;
4 (2) means for preparing, using said web site contents, a list of page structures for said web sites
5 and a list of page attributes for web pages; and
